

Flowis

Flowis is SoftPoint's core application for workflow management. It automates many processes in the company, from supplier invoices, customer orders, account reconciliations, HR onboarding process and many others.

Flowis is a powerful platform that can be tailor made for every customer without the need of code change. This can be achieved by the robust configuration possibilities Flowis offers.

It comes with wide range of supporting add-on modules which enhance its functionality. Due to its architecture, Flowis can be scaled for handful of small processes or hundreds of thousands of complex transactions.

Robust IT architecture

Based on the customer's needs Flowis can be deployed anywhere between simple one server implementation to complex multi data-center across globe implementations.

Supporting multiple finance systems

Flowis can integrate to many accounting softwares, thus harmonize company processes without the expensive need for ERP change.

Extensive configuration possibilities without need for code change

There are no expensive customizations in Flowis, all tailor made implementations are achieved via flexible configuration.

Automation of process

Flowis can lead your digital transformation by doing the repetitive work, so your team can concentrate on creative, high-value work.
